

## TE42 || Digital Temperature Transmitter

The TE42 is the latest generation 4-20 mA output digital head transmitter for temperature measurement of fluids and gases.

It accepts an input signal from resistance thermometers (RTD). It is easily installed in any industry-standard terminal head (form B, BUS, BUSH, S79, BBK).

### Programmable Configuration

The TE42 is programmed for a particular application with the help of a programming kit and a PC. This can be done either before installation (off-line) or after installation (on-line). It can also be factory programmed per user requirements (see Ordering Code) prior to delivery. The configuration settings are stored in the transmitter's non-volatile memory (EEPROM)

### TZ41 Programming Kit

The TZ41 Programming Kit consists of a PC software package, a communication adaptor unit, and a PC connection cable.

The communication adaptor electrically isolates the transmitter from the PC.

Bi-directional data communication allows the TE42's configuration details and tag number to be called from the PC, using the programming kit.

#### Input

**Resistance Type Temperature Sensor:**  
The TE42 is compatible with Pt-100 RTD temperature sensors con. to EN 60751. Lead-wire compensation is possible up to  $20\Omega$ .

#### Output

User programmable for 4-20mA or 20-4mA output, with 2-wire loop connection. Sensor open or short condition results in output signal being driven downscale or upscale (user programmable) per NAMUR NE43 specifications.

The device is protected against reverse polarity.

### Important Features

- 2-wire 4-20 mA output
- Compatible with Pt-100 RTD sensors acc. to EN 60751 (IEC 751, DIN 43760)
- Unaffected by EMI
- Conform to EMC norms
- High accuracy
- Very low temperature coefficient
- PC programmable
- Sealed against moisture / humidity
- Sensor fault detection

### Applications

- Food processing industries
- Heating, ventilation, air-conditioning
- Environmental systems
- Chemical process industries
- Petrochemicals

## Specifications

	General	Resistance Thermometer (RTD) Input		
		Type	Min. Temperature	Max. Temperature
Power supply	24 V DC (10-35 V DC)	Pt 100	-200°C	850°C
Min. input current	< 3.5 mA			10 K
Current limit	< 23.0 mA			
Switch on delay	4 sec			
Response time	2 sec			
Sensor rupture	<3.6 mA or >21.0 mA (configurable)			
Influence of power supply	± 0.01 %/V			
Connection type	2-wire			
Current output	4-20 mA or 20-4 mA			
Max. load	(V <sub>ref</sub> -10V) / 0.022 A			
Long term stability	< 0.1 K / year			
Linearity error	< 0.1 %			
Temperature drift	0.1 % / K			
Calibration temperature	23°C ± 5 %			
Adjustable zero range	< 50% FS			
Damping (programmable)	0-60 sec			
Ambient temperature	-40...+85°C			
Climatic class	Cl. C, EN 60654-1			
Weight	40 g			
Protection class	IP 66 / IP 00			
EMC immunity	Acc. to EN 61326-1			
Vibration protection	4g / 2...150 Hz			

## Adjustment Features

By means of PC configuration kit TZ41

### Input

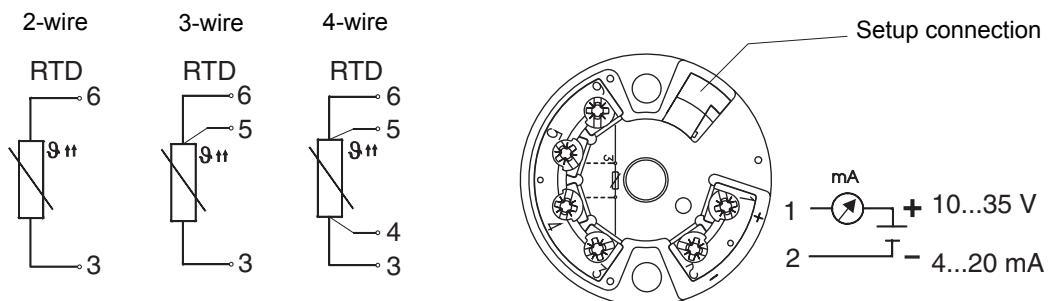

Resistance Thermometer (RTD)	
Pt100 acc. to DIN EN 60751	
2 wire 3 wire 4 wire	
Measuring range ___ - ___ °C	
Extended Adjustments	
Cable resistance compensation: ___ Ω (0...20 Ω) (2 wire RTDs only)	
TAG no.: _____ (max. 8 digits)	

### Output

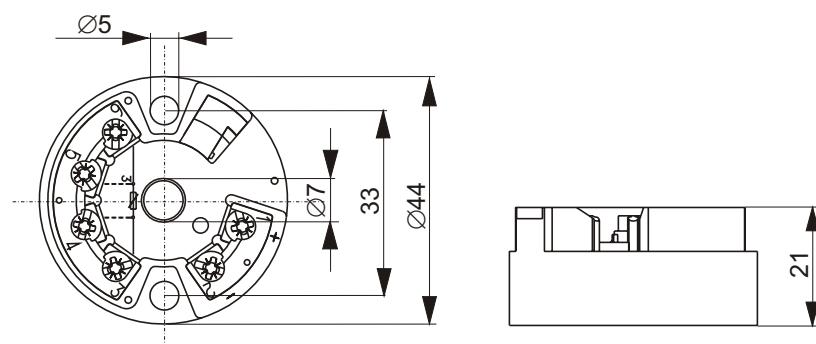

Fault Signal	Signal	Damping
< 3.6 mA (NAMUR)	4-20 mA	0-60 sec
> 21.0 mA (NAMUR)	20-4 mA	

## Terminal Connections

## Dimensions

(all units in mm unless stated otherwise)

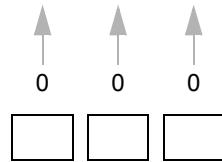

## Ordering Code

Digital Temperature Transmitter

TE 42 **0 0 1 1**    **9**
